SepQ'25 report

SepQ'25 report; production & cash pre-reported, costs beat

Pre-released production of 24koz (18% QoQ) was in line with CGe (see research). AISC of US\$1,880 beat CGe US\$2,061/oz, with variance attributed to better-thanexpected strip and grade. Ex royalty AISC of US\$1,166/oz improved 15% QoQ, reflecting improving ROM ore feed (vs stockpiles) and continued strong performance in the processing plant, running at an annualised rate of 5.8Mtpa (+16% vs nameplate). Sales of 26.3koz were higher on GIS drawdown and delivered FCF of ~A\$40m. Cash and bullion of A\$115m was pre-reported.

Outlook

KCN has made no changes to FY26 guidance of 85-95koz at US\$1,550-\$1,750/oz (preroyalty). With KCN starting to build a track record of operating performance, guidance appears an achievable target (i.e. annualising SepQ would see KCN beat on production & cost guidance). As a result we make minor updates to our modelling to better reflect strong plant throughput and improving unit cost economics. We now assume KCN beats guidance - CGe 96koz at ex. royalty AISC of ~US\$1,500/oz (inc. royalty US\$2,105/oz), and a \sim 5% improvement in AISCs over the LOM.

On our deck, we estimate KCN can generate ~A\$260m in FCF over FY26 supporting a dramatic improvement in KCN's liquidity and balance sheet (CGe FY26 closing cash of A\$321m). We believe this will allow KCN to comfortably service existing debt (A \$41m) and provides increasing potential for capital returns and/or non-organic growth opportunities in the medium term.

Model revisions

We have updated our modelling for actuals and to better reflect operating performance. The net impact is an average ~11% improvement in our EBITDA estimates over FY26E-28E.

Valuation and recommendation

We increased our risked NPV5% valuation to A\$7.65/sh (from A\$6.95/sh).

With operating performance improving, strengthening balance sheet and FY26E FCF yields of >25% we think the shares have strong potential to continue to re-rate over FY26. Additionally, any visibility on the potential divestment of the Nueva Esperanza silver project in Chile and/or ongoing exploration success at South-East Complex represents potential upside to our valuation. BUY.

Target Price / Valuation Methodology:

Kingsgate Consolidated Limited - KCN

Our price target for KCN is based on a risked NPV5% for Chatree. Our assumed production scenario is largely based on the company's existing LOMP and discussions with management, overlaid with our pricing and discount rates.

Risks to achieving Target Price / Valuation:

Kingsgate Consolidated Limited - KCN

Geopolitical risks

Chatree is located in Thailand which is considered an emerging market. As such, KCN, through the Chatree Gold Mine, carries a higher degree of economic, political, social, legal and legislative risk. We saw this risk play out in practice when the Thai government revoked KCN's licence to operate Chatree in 2016. There is a risk this happens again, albeit we think this is unlikely given the actions by the new Thai government and KCN to remedy the situation.

Financing risks

As KCN continues to ramp up operations at Chatree, there is a risk that additional external funding may be required (via equity or debt markets) to assist with its working capital requirements.

Exploration risks

Exploration is subject to several risks and can require a high rate of capital expenditure. Risks can also be associated with conversion of inferred resources and lack of accuracy in the interpretation of geochemical, geophysical, drilling and other data. No assurances can be given that exploration will delineate further mineral Resources nor that the company will be able to convert the current mineral resource into minable Reserves, noting our base case mineable inventory is underpinned by Reserves only.

Operating risks

Companies in production will be subject to risks such as plant/equipment breakdowns, metallurgical (meeting design recoveries within a complex flowsheet), materials handling and other technical issues. An increase in operating costs could reduce the profitability and free cash generation from its operating asset considerably and negatively impact valuation. Further, the actual characteristics of an ore deposit may differ significantly from initial interpretations which can also materially impact forecast production from original expectations.

Commodity price and currency fluctuations

The company as a gold producer is exposed to commodity price and currency fluctuations, often driven by macro-economic forces including inflationary pressure, interest rates and supply and demand of commodities. These factors are external and could reduce the profitability, costing and prospective outlook for the business.

Short-Term Trade Ideas

Research Analysts may, from time to time, discuss "short-term trade ideas" in research reports. A short-term trade idea offers a near-term view on how a security may trade, based on market and trading events or catalysts, and the resulting trading opportunity

that may be available. Any such trading strategies are distinct from and do not affect the analysts' fundamental equity rating for such stocks. A short-term trade idea may differ from the price targets and recommendations in our published research reports that reflect the research analyst's views of the longer-term (i.e. one-year or greater) prospects of the subject company, as a result of the differing time horizons, methodologies and/or other factors. It is possible, for example, that a subject company's common equity that is considered a long-term 'Hold' or 'Sell' might present a short-term buying opportunity as a result of temporary selling pressure in the market or for other reasons described in the research report; conversely, a subject company's stock rated a long-term 'Buy' or "Speculative Buy' could be considered susceptible to a downward price correction, or other factors may exist that lead the research analyst to suggest a sale over the short-term. Short-term trade ideas are not ratings, nor are they part of any ratings system, and the firm does not intend, and does not undertake any obligation, to maintain or update short-term trade ideas. Short-term trade ideas are not suitable for all investors and are not tailored to individual investor circumstances and objectives, and investors should make their own independent decisions regarding any securities or strategies discussed herein.
